

# iMedAutomate

Automate the design and maintenance of forms and content

Historically, Forms Committees employed manual, paper-based processes to administer the development and approval of forms and to manage the updates to those documents. The proliferation of electronic health records (EHRs) has placed increased demands for accelerated turnaround time and improved accuracy on a process often constrained by fixed resources.

Taylor Healthcare's iMedAutomate is a flexible, web-based technology that automates a traditionally manual process. iMedAutomate streamlines management of clinical, administrative and departmental content — paper or electronic — with an easy-to-use, intuitive system requiring no additional hardware and minimal IT support.

Communication among healthcare team members influences the quality of working relationships, job satisfaction and profoundly impacts patient safety.

## The iMedAutomate Advantage

- Establish a clearly defined workflow process.
- Identify exact roles and a content approval matrix.
- Define form and content design as well as change and approval workflows.
- Accelerate document and content turnaround via the delineation of multiple process owners.
- Create a system that ensures compliance with the organization's policy for clinical content creation and change management.
- Support DNV GL NIAHO® and ISO 9001 standards.

## How iMedAutomate Works

Whether it's documents that must remain paper-based, set content for HIS entry screens, or order sets that now reside in the EHR, managing a healthcare organization's clinical and administrative content is more complex than ever.

**iMedAutomate from Taylor Healthcare is a state-of-the-art tool that streamlines your Forms Committee processes.**

**Predefined Members:** Establish roles and approval hierarchy. Maintain user groups and rosters.

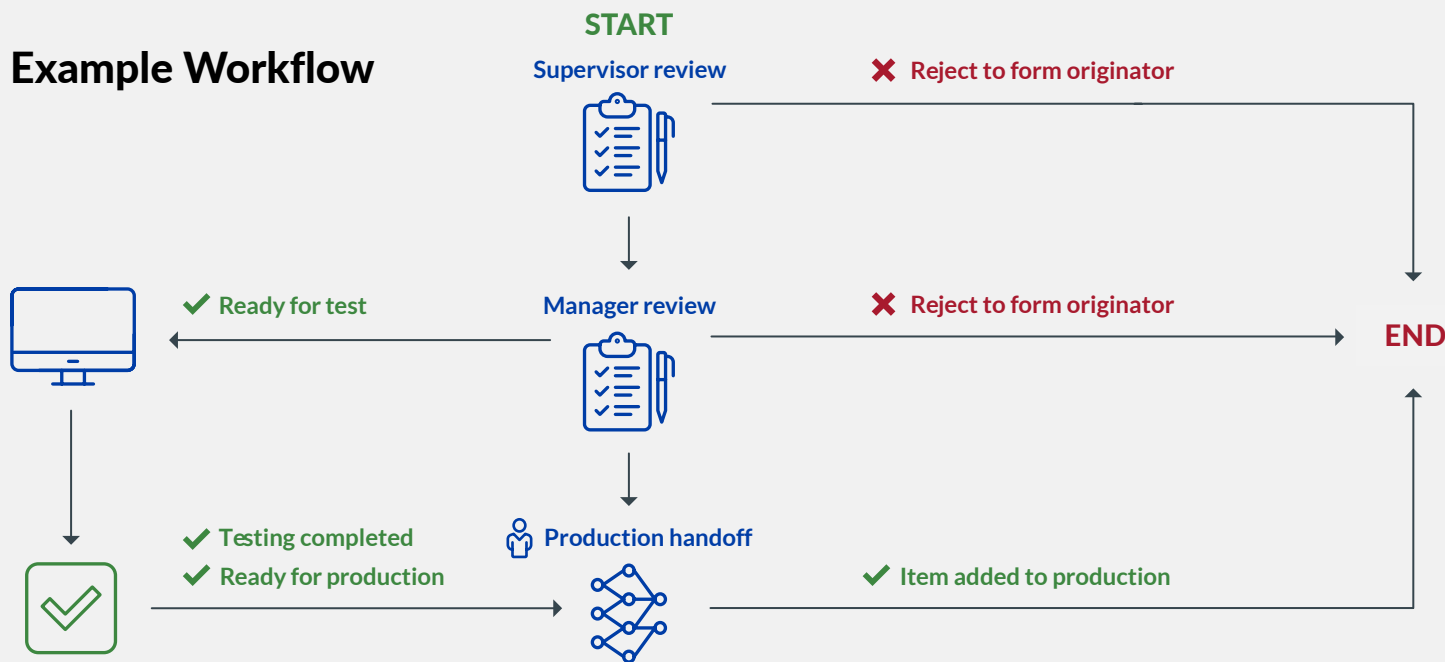

**Predefined Processes:** Define processes to be automated and completed.

**Workflow Efficiency:** Email tasks and assignment reminders to members. Stay continuously engaged with users. Maintain process visibility to all members and requesters.

**Media Neutral:** Manage all of an organization's documentation regardless of the type of media. Support content ranging from printed brochures to electronic order sets.

**Flexibility:** Add users at any time and modify roles as needed. Access via the web from any workstation — no special hardware or device-specific software is required.
