

Laser Wristbands

Positive patient ID from admission through discharge

The Joint Commission's top patient safety goal is to improve the accuracy of patient identification. Taylor Healthcare provides a complete assortment of patient wristbands — all of them latex-free — to help you meet this goal:

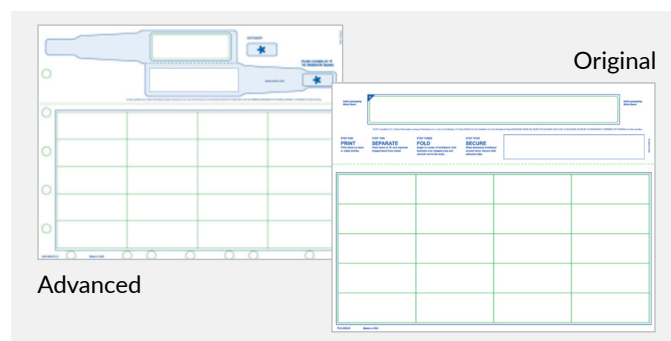

- Adult, pediatric and infant sizes
- Labor and delivery
- Tamper-evident adhesive closures
- Integrated chart labels
- Laminated versus non-laminated
- Wristband extenders and more

Non-Laminated

Coated with our proprietary LaserLock™ finish, Taylor Healthcare's non-laminated option creates a durable bond between the laser toner and wristband. The result is a clear, legible image that lasts for the entire patient stay.

- 100% film-based waterproof material
- Eliminates cost and time associated with laminated constructions
- 50% faster application to the patient
- Allows space for more chart labels

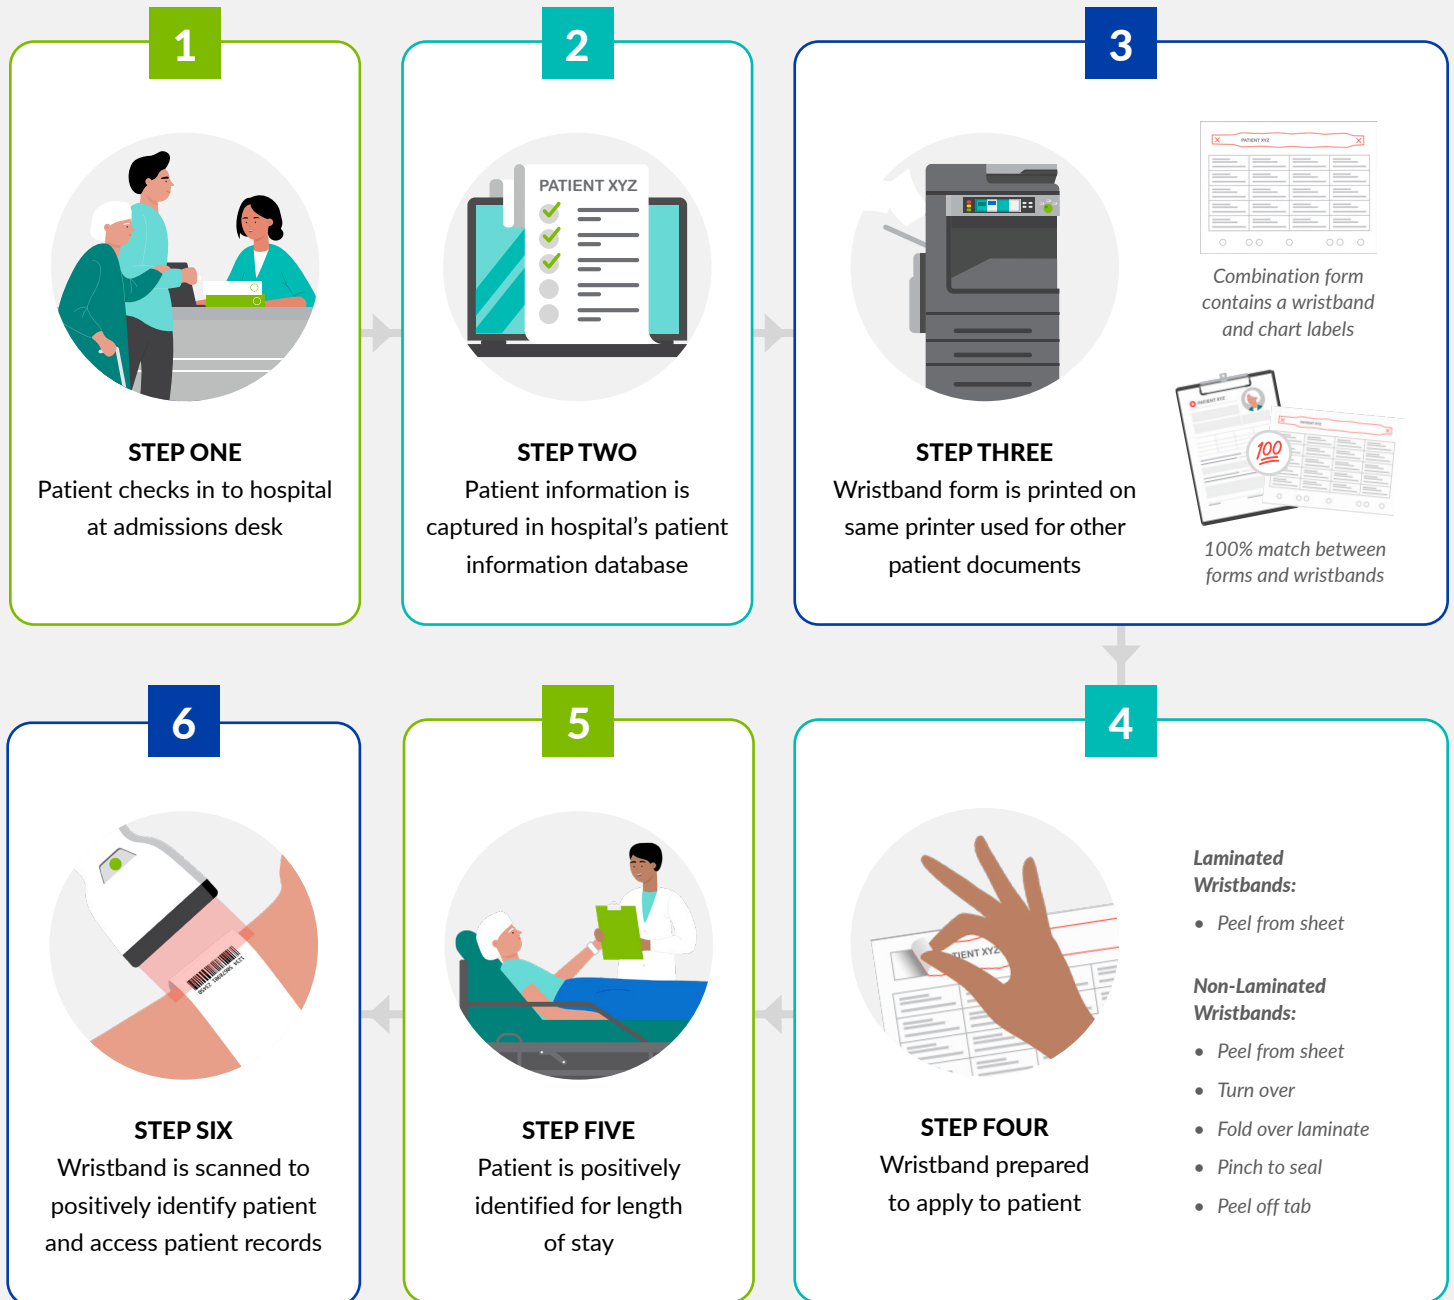

Laminated

Our laminated wristbands have a clear, foldover laminate to prevent smearing. Two options are available: the original design and an advanced laminated construction.

- Self-laminating seal protects the paper and toner from moisture and hand sanitizers, extending wristband life
- Anti-wicking coating on paper substrate
- Lay-flat designs available

The Laser Wristband Workflow

Unbiased Advice

Taylor Healthcare has provided patient identification solutions to healthcare organizations for decades. We offer our unbiased insights on the pros and cons of all our wristband solutions, helping you to find the best "fit" for any wristband application.
